

NANO PUCK

Loudspeaker & Component Energy transfer & isolation unit

Once the full impact and understanding on the devastating effects resonances have on sonic reproduction were bought to fruition. Something had to be created to limit the Impact on function of ALL ancillary components and the Nano Puck was developed.

We concentrated on delivering a solution for interim general application; until the day a fully resonance controlled ancillary chain, will be available from us.

We offer various state of the art transducers and two Cable System's to date. These devices take the term support to the next generation. They release the FULL potential of your ancillaries in allowing function and "Signal Integrity".

The Nano Puck, King Puck and Nano On rack system offer tremendous Value and performance optimisation.

The Nanon systems address issues that to date all isolation supports however elaborate have-not so much overlooked as more so thought completely irrelevant! Hence with isolation addressed only resolving 10% of the problem. The greater fundamental issue's of stopping energy getting to your unit & in your operating unit, not addressed i.e. effects of power transformers and other "generating" components, very much so resonating away in harmony internally in our ancillaries and destroying signal integrity step by step along the vast path from microphone to voice coil.

The Pucks are a Simple yet a fundamentally designed sandwich of our developed membrane and polymers. They consist of 4 non-specific thicknesses of material sandwiched within 5 specific membranes with a membrane cosmetic surround and cosmetic stainless steel mirror finish Top.

They are used under the spike or base of a loudspeaker's System/ Amplifiers/CD Players/DAC'S/Transports/ All Power supply unit's/Turntables/motor units/cable runs/ computers/ghetto blasters! (Maybe money could here be spent else where-Ha ha-you get the picture) improving the resolution, imaging, focus and dynamics with the starting and stopping of leading edges, they will add musicality beyond belief and transform the system not only in minute portrayal/information but in fundamental context workings. All who have them very rarely have just a set- in fact I know of no one -Be Warned!

Under components they will out perform all you expectations of the finest supports and are a 10th of the price of the finest specialist platforms on the market today (yes it is with using between these also!) with a simple demonstration. Further more they are at home on hifi racks, floors or fine arts furniture. At last you can have a nice piece of audio nirvana on the floor or on any fine arts piece of furniture or contemporized placement without sonic compromise.

They are an integral part of our Loudspeakers system requirements, removing and encapsulating them from their environment surround and full function.

This is the cheapest substantial scientific upgrade you will ever do. A true missing link of the chain finally bought to you by Audio Acoustics -Unprecedented.

Naturally full money back if not 100 % absolutely delighted, Pick Jaw from floor! Guarantee is offered through our authorized dealers or ex factory.

We look forward to the opportunity to guide and help you create a true state of the art awesome "No system". Should you require our input please contact us and any question issues/info you may need be addressed.

*"Just can not go back! There Amazing! Just Amazing,
There not much more I can say!"*

Mr Munir Ickenham
